

(a) Structured high-diversity fields

temporal braid: P_a / two-4-cycle
 $N = 106$, $N_{\text{eff}} = 76.2$

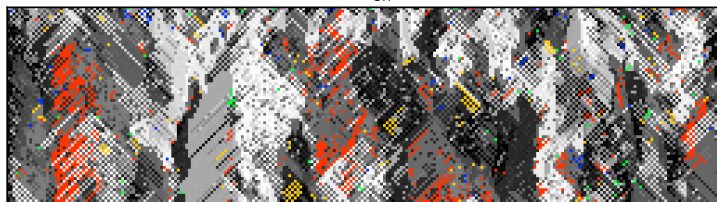

genotype G above; phenotype X below

continuous blend: strength 0.35
 $N = 79$, $N_{\text{eff}} = 48.3$

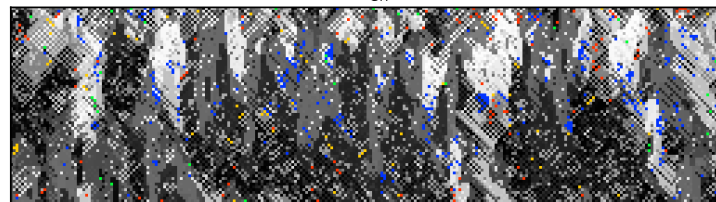

genotype G above; phenotype X below

spatial niches: width 16
 $N = 114$, $N_{\text{eff}} = 85.0$

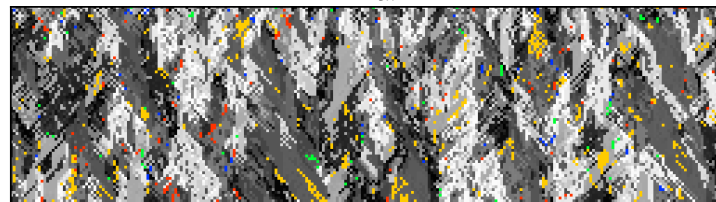

genotype G above; phenotype X below

collapsing pair: rot+2 / rot+4
 $N = 78$, $N_{\text{eff}} = 50.1$

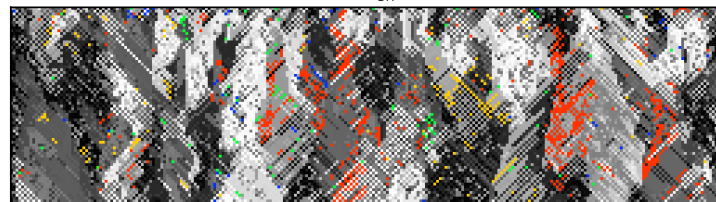

genotype G above; phenotype X below

continuous blend: strength 0.70
 $N = 108$, $N_{\text{eff}} = 82.5$

genotype G above; phenotype X below

spatial niches: width 64
 $N = 121$, $N_{\text{eff}} = 96.3$

genotype G above; phenotype X below
