

A family of operators, ranked by cycle structure (b · positive offsets)

Each row: $\text{bit}[\sigma(k)] := \neg\text{bit}[k]$, σ = rotate-by-offset (wrap). genotype 256-colour | phenotype b/w, 100 gens, two seeds.

offset +1

gcd 1 · one 8-cycle

no collapse (~t100)

offset +2

gcd 2 · two 4-cycles

collapses ~t33

offset +3

gcd 1 · one 8-cycle

no collapse (~t100)

offset +4

gcd 4 · four 2-cycles

collapses ~t45
